Branch : B.Tech CSE
Course Code : CSA2001

Inroduction

This project focuses on developing essential digital literacy skills required for students in today's technology-driven environment. It covers important areas such as online safety, the effective use of digital tools, building a professional online presence, and improving digital communication skills. These aspects are crucial not only for academic success but also for future career opportunities.

The project involved several practical tasks that helped in applying these concepts in real situations. These included designing an infographic to present information visually, creating a digital literacy awareness quiz using online tools, and writing professional emails following proper etiquette. Each task was aimed at enhancing both technical and communication abilities.

Through this project, I was able to understand the importance of responsible digital behaviour and how to use online platforms effectively. Overall, it provided a comprehensive learning experience by combining theoretical knowledge with practical application, making it highly relevant and useful.

Task 1

For this project, I used Canva.com, an online graphic design tool, to create my infographic. Canva provided a wide range of templates, icons, and layout options, which made it easier to organize my ideas visually. My design focuses on key aspects of digital literacy, including what digital literacy means, useful digital tools for students, safe internet practices, and building a professional online presence. I structured the infographic into clear sections so that each topic is easy to understand at a glance. I also used icons and color coding to make the content more engaging and visually appealing.

One interesting aspect of using Canva was how simple it was to customize elements like fonts, colors, and graphics to match the theme of my infographic. However, I found it slightly difficult to balance the amount of information with the available space. Ensuring that the design looked clean while still including all important points required careful editing and layout adjustments. Overall, the experience was both creative and informative.

Task 2

For my project, I chose three key platforms: GitHub, LinkedIn, and Kaggle. Each of these platforms serves a different purpose in building my academic and professional profile as a B.Tech student.

GitHub is mainly used for hosting and managing code repositories. I plan to use it to upload my projects, collaborate with others, and showcase my coding skills to potential recruiters. LinkedIn is a professional networking platform where I can connect with industry professionals, share my achievements, and stay updated with job opportunities and trends. Kaggle is focused on data science and machine learning; it provides datasets, competitions, and notebooks that help in improving practical skills.

Over the next four years, I plan to actively use these platforms to build a strong portfolio. I will regularly upload projects on GitHub, maintain a professional profile on LinkedIn, and participate in Kaggle competitions to gain hands-on experience. This consistent effort will help me develop skills, gain visibility, and prepare for future career opportunities.

Task 3

For this part of my project, I used Google Forms to create a Digital Literacy Awareness Quiz. Using this platform, I built a quiz consisting of five questions, including multiple choice and short answer types. The quiz focused on important topics such as digital literacy, safe internet practices, and professional online behavior. While creating it, I practised structuring questions clearly, selecting appropriate answer options, and organizing the form in a user-friendly way.

This activity helped me understand how to design effective assessments and collect responses digitally. I also learned how to use features like required questions and quiz settings, which make evaluation easier and more efficient. These skills will help me academically in several ways. Google Forms can be used for conducting surveys, collecting feedback, and even preparing small tests or quizzes for study groups. It also improves my ability to present information in a structured format. Overall, using this tool has enhanced my digital literacy and will support me in future academic projects and collaborative work.

Task 4

One situation where poor digital communication caused a problem is when a student emailed a professor with a very short and unclear message like “Submit later?” without any subject line or proper explanation. The professor misunderstood the message and assumed the student was being careless or disrespectful, which negatively affected their impression of the student. This happened because the email lacked clarity, context, and professionalism.
This issue could have been avoided by following proper email etiquette. The student should have included a clear subject line, a polite greeting, and a brief explanation of the situation. Writing in a respectful tone and clearly stating the request would have helped the professor understand the situation better. This example shows that even small mistakes in digital communication can lead to misunderstandings and impact academic relationships.

Task 5

What surprised me most while researching this topic was how common and sophisticated cyber scams have become, especially those related to UPI and phishing. I realized that even small mistakes, like clicking on an unknown link or approving a payment request without checking, can lead to serious financial loss within minutes. It was also surprising to see how many people are unaware of basic safety practices, despite using digital platforms daily.

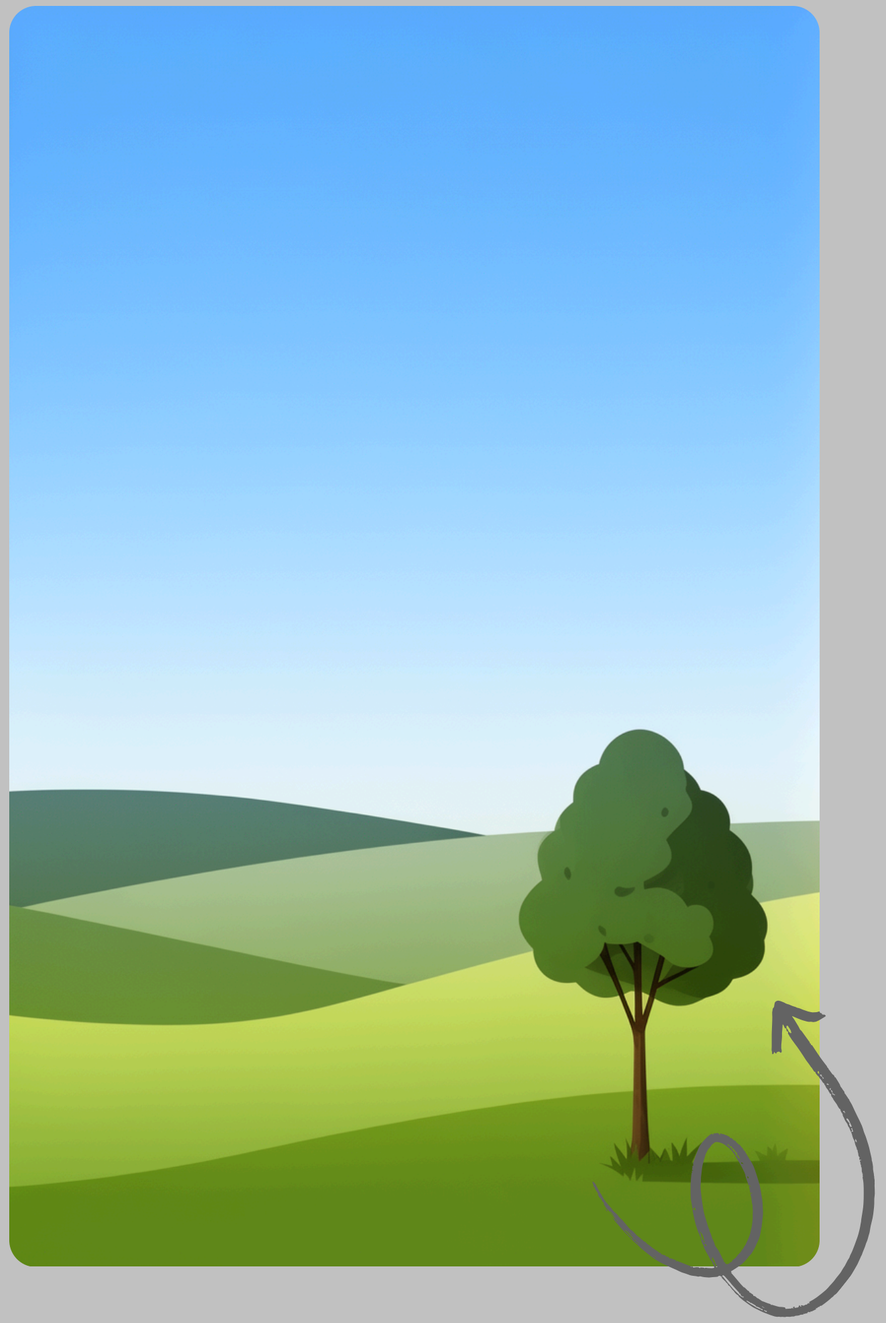
As a result, one habit I will personally change is being more cautious before taking any action online, especially in financial matters. I will always verify links, double-check UPI IDs, and avoid sharing any sensitive information. This shift will help me stay more secure and responsible in my digital activities.

Conclusion

This project significantly improved my digital awareness, communication skills, and ability to use important tools effectively. Throughout the project, I gained a better understanding of how to use digital platforms responsibly and efficiently in an academic context. I learned how to create visually engaging content using Canva, organize and present my work professionally on GitHub, and design structured quizzes using Google Forms.

Additionally, I developed a deeper understanding of online safety practices, including protecting personal information and avoiding cyber threats such as phishing and fraud. The tasks also helped me improve my professional communication, especially in writing formal emails and understanding how tone and clarity impact the message.

Overall, this project has made me more confident in using digital tools for learning and collaboration. It has also prepared me to build a strong digital presence and apply these skills in future academic work and professional opportunities.



Thank You!

I appreciate your attention today
